

## Raman Measurement of Carotenoids in Living Tissues

*A validated method for determining meaningful aspects of human health*

Over 50 full-length peer-review articles validate the use of Raman spectroscopy for the measurement of carotenoids in living tissues. Additional abstracts presented at scientific symposiums further confirm the validity of this method.

The Pharmanex BioPhotonic Scanner uses resonant Raman light to detect concentrations carotenoids in *intact* human skin as an indicator of nutritional intake and *in vivo* antioxidant status. Prior to being adapted for measurements in human skin, Raman resonance was validated for detection of carotenoid concentrations in *intact* human retinas (an indicator of macular health). Well over a dozen peer-reviewed articles have been published on the use of Raman spectroscopy to detect macular carotenoids *in vivo*. Raman spectroscopy has also been validated as an accurate measurement of skin carotenoid concentrations. Pharmanex has published three full-length studies in English, and an additional two full-length studies in Chinese (Chinese publications presented data that is entirely unique from data published in English journals; the Chinese papers are not simply translations of the English publications).

The Pharmanex BioPhotonic Scanner is highlighted in the highly respected textbook: *Krause's Food, Nutrition and Diet Therapy* (12th Edition). It has also been given a complete chapter in the book *Carotenoids and Retinoids: Molecular Aspects and Health Issues*, which was edited by the distinguished Dr. Lester Packer (Father of the Antioxidants).

Pharmanex is not the only research group that has used and validated Raman spectroscopy for the measurement of skin carotenoid concentrations. Other research groups (all disinterested in Pharmanex, Nu Skin, or the sale of dietary supplements) have designed their own Raman spectrometers to measure skin carotenoids.

**The following full-length studies are co-authored by at least one in-house Pharmanex scientist, and each of the following studies used the Pharmanex BioPhotonic Scanner:**

1. Wood SM, Mastaloudis AF, Hester SN, Gray R, Kern D, Namkoong J, Draelos ZD. Protective effects of a novel nutritional and phytonutrient blend on ultraviolet radiation-induced skin damage and inflammatory response through aging defense mechanisms. *J Cosmet Dermatol.* 2017 Dec;16(4):491-499. Epub 2016 Nov 24. *Full-length article available at:* <http://onlinelibrary.wiley.com/doi/10.1111/jocd.12295/epdf>

**Book chapters or sections that discuss the Pharmanex BioPhotonic Scanner and related research:**

21. *Carotenoids and Retinoids: Molecular Aspects and Health Issues.* Gellermann W, Zidichouski JA, Smidt CR, Bernstein PS. Raman Detection of Carotenoids in Human Tissue. In: Packer L, Obermueller-Jevic U, Kraemer K, and Sies H, eds. Champaign, IL: AOCS Press, 2005: Ch. 6, 86-114.
22. Mahan LK and Escott-Stump S. (Eds.). *Krause's Food, Nutrition and Diet Therapy*, 12th Ed. Philadelphia, PA: Saunders 2007; Ch. 15, 427-428.

Krause's Food & Nutrition Therapy has been considered one of the most authoritative nutrition texts for over 50 years worldwide. It provides a basic overview of nutrition as well as in-depth information on up-to-date nutrition therapies for medical conditions. Krause's is a text used by students in many allied health programs as well as other disciplines interested in the theoretical and clinical knowledge of the nutrition care process. It is commonly used as a reference for dietitians, nurses, doctors, dentists, life coaches, health educators and child development specialists.

Although Pharmanex (Nu Skin) owns exclusive rights for use of Raman spectroscopy in *for profit* settings, other research groups are permitted to develop their own Raman skin carotenoid devices for research purposes. The following studies use Raman spectroscopy to measure skin carotenoid concentrations. The Raman devices used in these studies were not the Pharmanex BioPhotonic Scanner. The fact that research groups other than Pharmanex (Nu Skin) have validated Raman measurement of skin carotenoids further confirms the legitimacy of this method. Full-length versions of the following studies can be purchased at the PubMed links provided below (abstracts available free of charge):

### *Raman spectroscopy in the Eye*

Prior to being adapted for measurements in human skin, Raman resonance was validated for detection of carotenoid concentrations in intact human retinas (an indicator of macular health). Well over a dozen full-length peer-reviewed articles have been published on the use of Raman spectroscopy to detect macular carotenoids. Many of the following full-length articles are available free of charge; all other links provide PubMed abstracts from which full-length articles may be purchased:
